

**IN THE SPECIFICATION:**

Please amend the specification as follows:

Please replace the paragraph beginning at page 10, line 24 through page 11, line 2 with the following rewritten paragraph.

The switch 11 may for example be a reed switch which is actuated under the influence of a magnetic field. A person may carry with them a device 20 which includes a magnet such as a permanent magnet which can be waved in proximity to the switch 11 thereby actuating the bolt to move from the locked position to the unlocked position. For example a parent may carry with them such a permanent magnet (for example as a necklace around their neck) for convenient access to be obtained to the cabinet via particular doors or drawers normally locked by the cabinet locks of the present invention.

Please replace the paragraph beginning at page 11, line 7 through line 11 with the following rewritten paragraph.

It will also be appreciated by one skilled in the art that a number of other switch and actuator 508 or key combinations are possible. For example any form of radio frequency device, a remote control using infra red radiation, coded magnetic or

electronic devices brought into proximity with the cabinet concerned are all considered within the purview of the present invention.
